EXPERIENCE

Data Science Intern at DevelopersHub Corporation

04-2026 – 06-2026

- Built Python data pipelines, optimized predictive models, and visualized insights to support technical decision-making.

Guest Speaker & Student Mentor (Career Track)

01-2026 – 02-2026

- Led strategic workshops for junior students on CS and Data Analytics tracks.

EDUCATION

Sukkur IBA University

Sukkur, Pakistan

Bachelor of Science in Computer Science (BSCS)

Expected Graduation: May 2027

PROJECTS

GameScope - Game Market Intelligence

AI & Data Analytics Web App

Scikit-Learn, Beautiful Soup, Requests, FastAPI, Pandas, Exploratory Data Analysis

- Engineered an end-to-end **Data Pipeline** and personalized **Recommendation System** by executing automated **Web Scraping** on 6,000+ data points from GOG.com.
- Conducted extensive **Exploratory Data Analysis (EDA)** and developed a production-ready **AI & Data Analytics** dashboard deployed via FastAPI for real-time item matching.
- Live App:** <https://mohammad-waseem-gamescope.hf.space/>
- GitHub:** <https://github.com/Muhammad95Waseem/GameScope-Game-Market-Intelligence/tree/main>

Customer Churn Prediction And Analytics

Machine Learning Pipeline

FastAPI, Scikit-Learn, NumPy, Charts.js, Hugging Face, Model Evaluation

- Developed a full-stack **Machine Learning Pipeline** using Scikit-Learn to build classification models that support proactive customer retention strategies.
- Performed rigorous **Model Evaluation** to achieve an 80.48% prediction accuracy, integrating interactive **Data Visualization** tools to deliver actionable, **Data-Driven Insights**.
- Live App:** <https://mohammad-waseem-customer-churn-prediction-and-analytics.hf.space/>
- GitHub:** <https://github.com/Muhammad95Waseem/customer-churn-prediction-and-analytics>

Housing Price Predictor

Predictive Modeling Project

Python, Scikit-Learn, Pandas, Flask, Hugging Face, Regression Models

- Designed a robust **Predictive Modeling** pipeline incorporating **Data Preprocessing**, **Feature Engineering**, and **Supervised Learning** regression models to analyze geographical real estate patterns.
- Optimized model hyper-parameters to secure a solid R^2 score of 0.78, deploying the automated valuation engine on Hugging Face Spaces for real-time web inference.
- Live App:** <https://mohammad-waseem-housing-price-predictor.hf.space/>
- GitHub:** <https://github.com/Muhammad95Waseem/housing-price-predictor>

SKILLS

Languages: Python, C++, Java

Data Engineering: BeautifulSoup, Scrapy, Requests, DBMS

Data Science & AI: NumPy, Pandas, Matplotlib, Seaborn, Power BI, Scikit-Learn

Web Development: HTML, CSS, JavaScript, FastAPI, Flask, PHP, Chart.js

Core Tools & Technologies: Bash, SQL, Git, GitHub, Hugging Face

CERTIFICATION

- The Ultimate Job Ready Data Science Course – CodeWithHarry
- Building APIs in Python – DataCamp
- Git Fundamentals – Coursera
- Web Scraping in Python – DataCamp
- Data Manipulation in Python – DataCamp
